

New Pulse Secure Access Suite delivers a complete Secure Access Solution for the next generation

Recently at the RSA Conference 2017, Pulse Secure – Booth Number N4135, launched the Pulse Access Suite, delivering on the promise of Secure Access for the Next Generation. The Pulse Secure Access Suite integrates everything needed to enable Secure Access, simplifying purchase, deployment and operations while offering more value compared to multi-vendor solutions.

Pulse Secure Access Suite is a comprehensive Secure Access solution that securely connects workers to company resources and protects company devices, regardless of location – in the data centre, internal network, cloud or mobile. Pulse Secure delivers secure access to all company resources via a single unified client or mobile application, dramatically simplifying access and increasing user productivity. Administrators configure contextual access policies to control access based on devices, locations, resources, users and groups, or even endpoint profiling.

Using the Pulse profiler to identify and profile what is on their internal network, administrators can extend policies to internal networks. Organisations can discover, secure and manage internal devices, Guest User access, and even BYOD devices. Detailed management and reporting meets the needs of the toughest regulatory compliance environments.
