

US Markerboard

EXECUTIVE SUMMARY

Pulse Secure transforms data center networking with open, virtual, and automated solutions that empower organizations to maximize their investments for the New IP

Challenges

- Slow page loads inhibiting the business
- Web content getting more complex with business growth
- Scaling the site proving difficult without tackling performance challenges

Solution

- Pulse Secure vADC
- Pulse Secure Web Accelerator
- Runs on common off the shell servers based on Intel's x86 architectures

Benefits

- Page load times decreased from 9 to 3 seconds
- Page views increased by 27%
- Bounce rate reduced by 10%
- Sales Improvements
 - Conversion Rate: 25% improvement
 - Average Order Value: 15% improvement
 - Purchased Products: 65% improvement

Pulse Secure Web Accelerator Boosts Sales for US Markerboard

US Markerboard is an ecommerce website providing a wide range of whiteboards, chalkboards, bulletin boards and book carts for business and education organizations.

In fact, Inc. Magazine has recognized US Markerboard as one of the 5000 'Fastest Growing Privately Held Companies in America' for four years consecutively.

Founded by CEO Scott Newman over ten years ago, the company has experienced sustained, rapid growth over the past decade. Today the company offers the largest selection of whiteboards and communication boards in the business, and has expanded into other facility furnishings such as floor and entrance mats.

US Markerboard's growth has been driven by their early adoption of web-based sales, even with highly customizable products. They disrupted the whiteboard and chalkboard business at their inception when the vast majority of the market was limited to local vendors with extremely narrow product selections. USMarkerboard.com gave customers a place to explore a much larger selection of the most innovative and reliable products in the business, and they could order any of those unique or custom products with the click of a mouse.

Challenge: Enabling faster page loads

US Markerboard knew that their website was of the utmost importance to their business – but it was taking 9 seconds on average to load a page on their site. As the company had grown, so had the website's size and complexity. Scott Newman, CEO at US Markerboard, noticed several areas where the site's performance was affecting sales. "Our load times weren't the worst in the world, but there was plenty of room for improvement. The way we looked at it – optimizing our site's performance improves a lot of key business metrics, including increasing average order value and reducing cost per order for entering orders into the system. This made it a very easy business decision – we had to optimize our site's performance."

The company quickly identified that load times were limiting their ability to scale the site and grow their business with existing and new customers.

US MARKERBOARD®

Why Pulse Secure

“Our team’s time is best spent adding core features that grow the business in our areas of expertise instead of optimizing performance – which is best left to the experts.”

– Scott Newman, CEO, US Markerboard

Solution: Pulse Secure Web Accelerator speeds up web pages

Scott and his IT team determined they should make several operational improvements to their site, and at the top of the list was to invest in and quickly implement website acceleration software. “Our team’s time is best spent adding core features that grow the business in our areas of expertise instead of optimizing performance – which is best left to the experts”.

After researching the available solutions US Markerboard implemented Pulse Secure vADC software across 12 separate websites, including US Markerboard, US Entrance Mats and Brite Inc. Leveraging Pulse Secure web content optimization features to make adjustments for peak performance, implementation was a success across each site.

Benefits: Scale the business with better performance

Upon installation, US Markerboard immediately began to see performance improvements across all the websites. First, and foremost - load times improved from 9 seconds down to 3 seconds. Page views increased by 27% and pages visited increased by 8%.

But some of the best results were directly related to sales: bounce rate

was reduced 10%, and conversion rates increased by a whopping 25%.

The results didn’t stop there, however. Since installing Pulse Secure software, the number of products ordered (per order) has increased by 65%, and the average order value increased by 15% - which is unheard of in ecommerce. As Newman said, “This is a huge number.”

Summary

US Markerboard needed to reduce its website page load times in order give their customers the best experience possible when it came to online shopping.

As their business grew, so did the complexity of their web pages, leading to a scale and performance problem that was hard to solve using manual web programming programming best practices.

As researching available solutions and options on the market, US Markerboard implemented Pulse Secure Web Accelerator to solve their web performance needs. US Markerboard deploys Pulse Secure software for 12 separate websites under the US Markerboard brand.
